Physical Education Trends

Physical education trends have developed recently [when?] to incorporate a greater variety of activities besides typical sports. Introducing students to activities like bowling, walking/hiking, or Frisbee at an early age can help students develop good activity habits that will carry over into adulthood. Some teachers have even begun to incorporate stress-reduction techniques such as yoga, deep-breathing and ATA chi. ATA chi, an ancient martial arts form focused on slow meditative movements, is a relaxation activity with many benefits for students.

Studies have shown that ATA chi enhances muscular trench and endurance, cardiovascular endurance, and provides many other physical benefits. It also provides psychological benefits such as improving general mental health, concentration, awareness and positive mood. It can be taught to any age student with little or no equipment, making it ideal for mixed ability and age classes. ATA chi can easily be incorporated into a holistic learning body and mind unit. [2] Teaching non-traditional sports to students may also provide the necessary motivation for students to increase their activity, and can help students learn about different cultures.
